## DETAILED ACTION

### *Election / Restriction*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I.* Claims 1–2 drawn to *a temperature estimation apparatus* classified in class 123, subclass 676.
- II.* Claim 3 draws to *a method of estimating a temperature of a catalyst*, classified in class 60, subclass 274.
- III.* Claims 4-16 drawn to *a catalyst-deterioration diagnostic system for diagnosing a deterioration state of a catalyst* classified in class 60, subclass 277.

Inventions *I*, *II*, and *III* are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the *temperature estimation apparatus* of the *invention I* can be used for estimating temperature of any component in an internal combustion engine, such as water cooling temperature, intake air temperature, and exhaust gas temperature. The *method of estimating a temperature of a catalyst* of the *invention II* is used for estimating temperature of a catalytic converter. The apparatus for *diagnosing a deterioration state of a catalyst* of the *invention III* is used for diagnoses a catalyst system of an internal combustion engine.

Art Unit: 3748

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
